## Research Interest

My research interests span privacy, security, and human-computer interaction. My dissertation focuses on understanding and improving people's adoption of protective behaviors in the face of privacy and security threats, e.g., in reacting to data breaches or exercising privacy choices on websites. I am also interested in understanding the privacy risks and needs of exposure-sensitive populations, such as survivors of intimate partner violence and older adults. I am a mixed-method researcher, with the most experience in survey, experiment, interview and focus group.
