Research Interest

I conduct research at the intersection of privacy, security, and human-computer interaction. I am interested in understanding users' privacy and security attitudes and behaviors, and based on this, providing actionable solutions and guidance to help users better manage risks associated with their personal data, in contexts such as data breach notifications, phishing and spyware warnings, and website privacy choices. In designing interventions, I aspire to explore the idea of moving away from the "one-size-fits-all" approach and considering individual differences, such as by making interventions cater to the need of marginalized or underrepresented populations. I am a mixed-method researcher, with the most experience in survey, experiment, usability testing, interview, and more recently participatory design.
